

Client Information about
Gleptosil® (Iron 200 mg/mL Solution for Injection)

For Use in Pigs

The Client Information Sheet contains important information about Gleptosil®. This sheet of information is provided only as supplemental information to the package insert. For more detailed information about Gleptosil®, refer to the product package insert.

Gleptosil® is a presentation of gleptoferron, a macro molecular complex containing iron in a readily utilizable form for the prevention and treatment of iron deficiency anemia in piglets. The solution contains phenol as a preservative.

Gleptosil® is not an approved drug product in the U.S. Gleptosil® is currently authorized for sale in Canada. Due to a potential animal drug shortage, the U.S. Food and Drug Administration is temporarily permitting marketing of Gleptosil® in the U.S. for prevention or treatment of anemia in baby pigs.

To report a suspected adverse reaction, complaint or product quality defect, call Ceva's Product Support Team at 1-800-999-0297. For additional information about adverse drug experience reporting for animal drugs, contact FDA at 1-888-FDA-VETS or www.fda.gov/reportanimalae.
