Re: K190966

Trade/Device Name: Katalyst Training System

Regulation Number: 21 CFR 890.5850

Regulation Name: Powered Muscle Stimulator

Regulatory Class: Class II Product Code: NGX Dated: January 30, 2020 Received: January 31, 2020

Dear Bjoern Woltermann:

We have reviewed your Section 510(k) premarket notification of intent to market the device referenced above and have determined the device is substantially equivalent (for the indications for use stated in the enclosure) to legally marketed predicate devices marketed in interstate commerce prior to May 28, 1976, the enactment date of the Medical Device Amendments, or to devices that have been reclassified in accordance with the provisions of the Federal Food, Drug, and Cosmetic Act (Act) that do not require approval of a premarket approval application (PMA). You may, therefore, market the device, subject to the general controls provisions of the Act. Although this letter refers to your product as a device, please be aware that some cleared products may instead be combination products. The 510(k) Premarket Notification Database located at https://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfpmn/pmn.cfm identifies combination product submissions. The general controls provisions of the Act include requirements for annual registration, listing of devices, good manufacturing practice, labeling, and prohibitions against misbranding and adulteration. Please note: CDRH does not evaluate information related to contract liability warranties. We remind you, however, that device labeling must be truthful and not misleading.

If your device is classified (see above) into either class II (Special Controls) or class III (PMA), it may be subject to additional controls. Existing major regulations affecting your device can be found in the Code of Federal Regulations, Title 21, Parts 800 to 898. In addition, FDA may publish further announcements concerning your device in the <u>Federal Register</u>.

Please be advised that FDA's issuance of a substantial equivalence determination does not mean that FDA has made a determination that your device complies with other requirements of the Act or any Federal statutes and regulations administered by other Federal agencies. You must comply with all the Act's

requirements, including, but not limited to: registration and listing (21 CFR Part 807); labeling (21 CFR Part 801); medical device reporting (reporting of medical device-related adverse events) (21 CFR 803) for devices or postmarketing safety reporting (21 CFR 4, Subpart B) for combination products (see https://www.fda.gov/combination-products/guidance-regulatory-information/postmarketing-safety-reporting-combination-products); good manufacturing practice requirements as set forth in the quality systems (QS) regulation (21 CFR Part 820) for devices or current good manufacturing practices (21 CFR 4, Subpart A) for combination products; and, if applicable, the electronic product radiation control provisions (Sections 531-542 of the Act); 21 CFR 1000-1050.

Also, please note the regulation entitled, "Misbranding by reference to premarket notification" (21 CFR Part 807.97). For questions regarding the reporting of adverse events under the MDR regulation (21 CFR Part 803), please go to https://www.fda.gov/medical-device-problems.

For comprehensive regulatory information about medical devices and radiation-emitting products, including information about labeling regulations, please see Device Advice (https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance) and CDRH Learn (https://www.fda.gov/training-and-continuing-education/cdrh-learn). Additionally, you may contact the Division of Industry and Consumer Education (DICE) to ask a question about a specific regulatory topic. See the DICE website (https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/contact-us-division-industry-and-consumer-education-dice">https://www.fda.gov/medical-devices/device-advice-comprehensive-regulatory-assistance/contact-us-division-industry-and-consumer-education-dice) for more information or contact DICE by email (DICE@fda.hhs.gov) or phone (1-800-638-2041 or 301-796-7100).

Sincerely,

For Vivek Pinto, Ph.D.

Indications for Use

510(k) Number (if known)

Katalyst Training System

K190966

Device Name

Form Approved: OMB No. 0910-0120 Expiration Date: 06/30/2020

Expiration Date: 06/30/2020 See PRA Statement below.

Indications for Use (Describe) The Katalyst Training System is an Over-The-Counter device intended to stimulate healthy muscles in order to improve or
facilitate muscle performance. It is to be used by adults only.
The Katalyst Training System is not intended to be used in conjunction with therapy or treatment of medical diseases or medical conditions of any kind. None of the training programs or operational parameters are designed to target injured or ailing muscles and its use on such muscles is contraindicated.
The Katalyst Training System's electrical impulses allow the triggering of action potentials on motoneurons of motor nerves (excitations). These excitations of motoneurons are transmitted to the muscle fibers via the motor endplate where they generate mechanical muscle fiber responses that correspond to muscle work. Depending on the parameters of the electrical impulses (pulse frequency, duration of contraction, duration of rest, total session duration), different types of muscle work can be imposed on the stimulated muscles.
Type of Use (Select one or both, as applicable)
Prescription Use (Part 21 CFR 801 Subpart D) Over-The-Counter Use (21 CFR 801 Subpart C)
CONTINUE ON A SEPARATE PAGE IF NEEDED.
This section applies only to requirements of the Paperwork Reduction Act of 1995.

Trade/Proprietary Name

Katalyst Training System

Common Name

Powered Muscle Stimulator for Muscle Conditioning

Classification Name

Powered Muscle Stimulator

Product Code:

Powered Muscle Stimulator, For Muscle Conditioning – 21 CFR 890.5850

Product Code NGX

Review Panel: 89, Physical Medicine

Regulatory Class

Class II

Predicate Devices

Compex Wireless USA (K170903)

Device Description

The Katalyst Training System is a battery powered muscle stimulator that uses electrical muscle stimulation (EMS) technology to stimulate your muscles and help to improve muscle performance. Specifically, it uses neuromuscular electrical stimulation (NMES) to stimulate motor nerves, creating a muscle contraction to recruit more muscle fibers while training.

It is designed to be used with the Katalyst Application, which is the interface between the user and the Impulse Pack and runs on a user supplied iOS device. The iOS device communicates wirelessly with the Impulse Pack using Bluetooth 4.2.

Indications for Use

The Katalyst Training System is an Over-The-Counter device intended to stimulate healthy muscles in order to improve or facilitate muscle performance. It is to be used by adults only.

The Katalyst Training System is not intended to be used in conjunction with therapy or treatment of medical diseases or medical conditions of any kind. None of the training programs or operational parameters are designed to target injured or ailing muscles and its use on such muscles is contraindicated.

The Katalyst Training System's electrical impulses allow the triggering of action potentials on motoneurons of motor nerves (excitations). These excitations of motoneurons are transmitted to the muscle fibers via the motor endplate where they generate mechanical muscle fiber responses that correspond to muscle work. Depending on the parameters of the electrical impulses (pulse frequency, duration of contraction, duration of rest, total session duration), different types of muscle work can be imposed on the stimulated muscles.

Comparison to the Predicate Device

The similarities and differences between the technology and specifications of the subject device and its predicate devices are reflected below:

System is not intended to be used in conjunction with therapy or treatment of medical diseases or medical conditions of any kind. None of the training programs or operational parameters are designed to target injured or ailing muscles and its use on such muscles is contraindicated. The Katalyst Training System's electrical impulses allow the triggering of action potentials on motoneurons of motor nerves (excitations). These excitations of motoneurons are transmitted to the muscle fibers via the motor endplate where they generate mechanical muscle fiber responses that correspond to muscle work. Depending on the parameters of the electrical impulses (pulse frequency, duration of contraction, duration of rest, total session duration), different types of muscle work can be imposed on the stimulated muscles.

is not intended for adjunctive therapy in the treatment of medical diseases and conditions of any kind. None of the Compex Wireless USA stimulation programs are designed for injured or disease afflicted muscles. Its use on such muscles is contraindicated. The work imposed on the muscles by the Compex Wireless USA programs is definitely not suitable for rehabilitation and physiotherapy. The Compex Wireless USA electrical impulses allow the triggering of action potentials on motoneurons of motor nerves (excitations). These excitations of motoneurons are transmitted to the muscle fibers via the motor endplate where they generate mechanical muscle fiber responses that correspond to muscle work. Depending on the parameters of the electrical impulses (pulse frequency, duration of contraction, duration of rest, total session duration). different types of muscle work can be imposed on the stimulated muscles. The Compex Wireless USA may therefore be considered a technique of muscle training. The Compex Wireless USA TENS is used for: • temporary relief of pain associated with sore and aching muscles due to strain from exercise or normal household and work activities. • the symptomatic relief and management of chronic,

intractable pain and relief of

		pain associated with arthritis.

Although there are minor differences observed between the Katalyst Training System and the predicate device, no difference found raised any question regarding safety and effectiveness of the new device.

Standards

The Katalyst Training System is designed and manufactured in accordance with the following standards:

- AAMI/ANSI ES60601-1:2005/(R)2012 And A1:2012, C1:2009/(R)2012 And A2:2010/(R)2012 (Consolidated Text) Medical Electrical Equipment Part 1: General Requirements for Basic Safety and Essential Performance (IEC 60601-1, Mod.)
- IEC 60601-1-2 Edition 4.0 2014-02 Medical Electrical Equipment Part 1-2: General Requirements for Basic Safety and Essential Performance Collateral Standard: Electromagnetic Disturbances Requirements and Tests
- IEC 60601-2-10 Edition 2.1 2016-04 Medical Electrical Equipment Part 2-10: Particular Requirements for The Basic Safety and Essential Performance of Nerve and Muscle Stimulators
- IEC 62133 Edition 2.0 2012-12 Secondary Cells and Batteries Containing Alkaline or Other Non-Acid Electrolytes Safety Requirements for Portable Sealed Secondary Cells, And for Batteries Made from Them, For Use in Portable Applications [Including: Corrigendum 1 (2013)]
- ISO 14971 Second Edition 2007-03-01 Medical Devices Application of Risk Management to Medical Devices
- ISO 10993-5 Third Edition 2009-06-01 Biological Evaluation of Medical Devices Part 5: Tests For In Vitro Cytotoxicity
- ISO 10993-10 Third Edition 2010-08-01 Biological Evaluation of Medical Devices Part 10: Tests for Irritation and Skin Sensitization
- AAMI /ANSI /IEC 62304:2006/A1:2016 Medical Device Software Software Life Cycle Processes [Including Amendment 1 (2016)]

Non-Clinical Testing

The Katalyst Training System was subjected to testing in accordance with the appropriate standards and the results are provided in this 510(k). The non-clinical tests performed are as follows:

- Biocompatibility Testing
 - The Skin contacting Base Layers have been tested to ISO 10993-5 and ISO 10993-10 standard under GLP.

- Software Verification and Validation
 - The Impulse Pack firmware and Katalyst Application were verified in accordance with the requirements of FDA's guidance document: General Principles of Software Validation. This testing proves that all software requirement specifications were met.
- Battery Testing
 - The Lithium-Polymer battery used in the Impulse Pack was tested by the battery manufacturer for compliance with IEC 62133
- Engineering Bench Testing
 - o In addition to the full system validation testing, the 510(k) also included testing in accordance with the recommendations of FDA's "Guidance Document for Powered Muscle Stimulator 510(k)s" issued on June 9, 1999.
- Electrical Safety and Electromagnetic Compatibility:
 - The Katalyst Training System has been tested to AAMI/ANSI ES60601-1, IEC 60601-1-2, and IEC 60601-2-10.
- Wireless Coexistence Testing:
 - The performance of the Katalyst Training System was evaluated in an environment with other Katalyst Training Systems and with other types of 2.4 GHz wireless devices (Bluetooth and Wi-Fi). The device met all specified requirements.

Clinical Testing

No clinical studies are submitted to support this premarket notification submission.

Conclusion

Test results demonstrate the Katalyst Training System is substantially equivalent to the predicate device.
