Form Approved: OMB No. 0910-0025 Expiration Date: August 31, 2023

FORM FDA 3632 (09/20)

Guide for Preparing Product Reports for Lasers and Products Containing Lasers

Public reporting burden for this collection of information is estimated to average 24 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to:

Department of Health and Human Services Food and Drug Administration Office of Chief Information Officer Paper Reduction Act (PRA) Staff PRAStaff@fda.hhs.gov

Please do NOT send your completed document to this PRA Staff email address.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

This guidance was written prior to the February 27, 1997 implementation of FDA's Good Guidance Practices, GGP's. It does not create or confer rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute, regulations, or both. This guidance will be updated in the next revision to include the standard elements of GGP's.

More industry guidance and assistance can be found at the FDA homepage, see: http://www.fda.gov/Radiation-EmittingProducts/.

Send your completed report to:

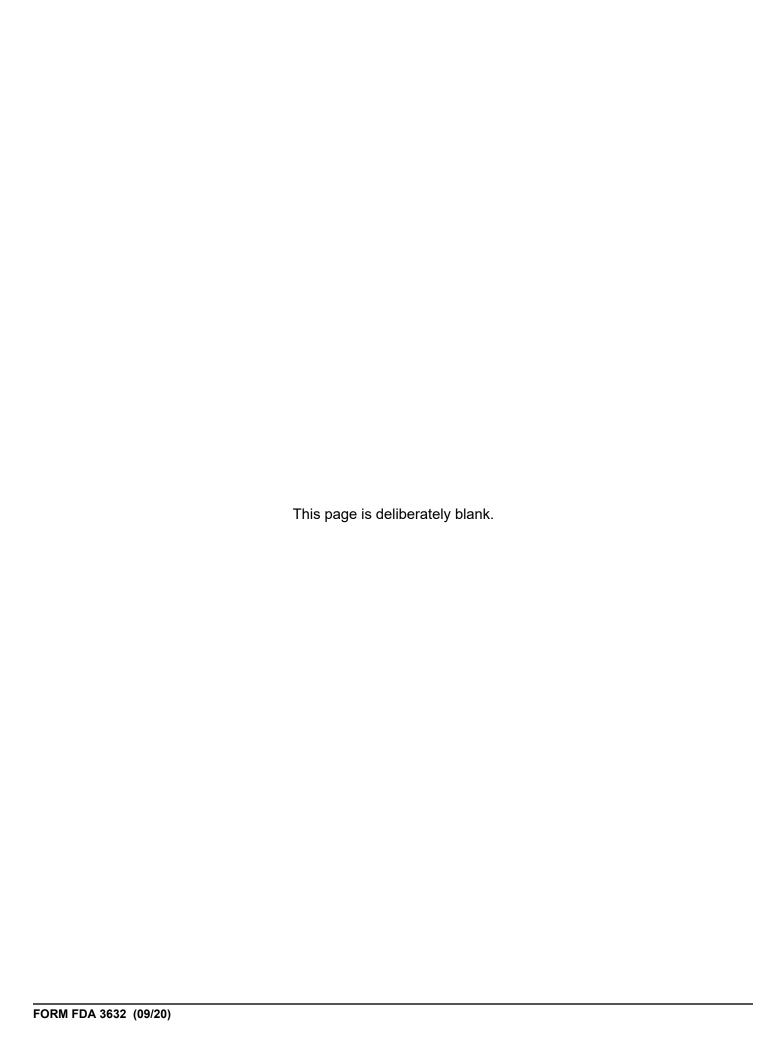

CENTER FOR DEVICES AND RADIOLOGICAL HEALTH DOCUMENT MAIL CENTER – WO66-G609 ATTN: ELECTRONIC PRODUCT REPORTS 10903 NEW HAMPSHIRE AVENUE SILVER SPRING, MD 20993-0002

Questions about reporting and suggestions for changes to this guide may be sent to the above address or may be discussed by calling 1-800-638-2041.

GUIDE FOR PREPARING PRODUCT REPORTS FOR LASERS AND PRODUCTS CONTAINING LASERS

September 1995

U.S. Department of Health and Human Services Food and Drug Administration Center for Devices and Radiological Health Silver Spring, MD 20993

Foreword

The Office of Compliance, Center for Devices and Radiological Health (CDRH) developed this guide. This guide will assist manufacturers¹ of electronic products which emit radiation in providing adequate reporting of radiation safety testing and compliance with federal performance standards. Title 21 of the Code of Federal Regulations (CFR), Parts 1002 and 1003 specify Reporting and Notification requirements^{2,3}.

Reports submitted on radiation safety of electronic products must follow the appropriate guide (21 CFR 1002.7). If the report does not follow an applicable guide it must contain a sufficient justification for any deviations. The submitter of the report will receive an acknowledgment letter with the accession number we assign to the report. Please reference this accession number in the future when providing additional information about this model family in either a supplement or the annual report. If a report is incomplete or inadequate CDRH may reject it and return it for completion. CDRH will not enter a rejected report into our database. Also, a rejected report will not receive an accession number.

WE DO NOT APPROVE THESE REPORTS OR THE PRODUCTS BEING REPORTED. It is the manufacturer's responsibility to certify that their products comply with all applicable standards (21 CFR 1010 - 1050), based on a testing program in accordance with good manufacturing practices. Prior to the shipment of products in interstate commerce 21 CFR 1002 requires the manufacturer to submit the report and to comply with all applicable importation requirements (21 CFR 1005). If there are deficiencies, we may disapprove the firm's quality control and testing program, determine that the product contains a radiation defect, or determine that the product fails to comply with a standard. We will notify the manufacturer if we make such a determination. CDRH may require the manufacturer to cease introduction into U.S. commerce until deficiencies are corrected, and to initiate a corrective action program (21 CFR 1003 - 1004) for products already introduced into commerce.

Please mail your reports to the address below (FDA can not process electronic submissions at this time). Provide the original report with appropriate signature(s) (no facsimiles, please). Provide extra copies only if this guide specifically requires them. Submit the report written in the English language. Translate any text that appears in a language other than English into English in a complete and accurate manner. Keep a copy of the completed reports in your records.

We are making our reporting guides and other regulatory information available on the Internet under http://www.fda.gov/Radiation-EmittingProducts/. No copyright exists for these guides. Reproduce these guides as needed. If you would like to comment on the reporting guides, web site, or future electronic submissions, you may direct the comments to the address below. If you need additional regulations for electronic products or medical devices, you should contact the Division of Small Manufacturers, International and Consumer Assistance by telephone at 1-800-638-2041 or by facsimile at 301-847-8149.

Sincerely yours,

Lillian J. Gill Director Office of Compliance

E-MAIL ADDRESS: dsmica@fda.hhs.gov

MAILING ADDRESS (see 21 CFR 1002.7 for further information):

CENTER FOR DEVICES AND RADIOLOGICAL HEALTH DOCUMENT MAIL CENTER – WO66-G609 ATTN: ELECTRONIC PRODUCT REPORTS 10903 NEW HAMPSHIRE AVENUE SILVER SPRING, MD 20993-0002

¹ Manufacturer (see 21) CFR § 1000.3 (n)) means any person engaged in the business of manufacturing, assembling, or importing electronic products.

² Accidental Radiation Occurrences: 21 CFR 1002.20 requires manufacturers to immediately report accidental radiation occurrences (see 21 CFR 1000.3(a) for the definition).

Notification: Title 21 CFR Part 1003 requires manufacturers to provide Notification of Defects or Failure to Comply. Send these notifications to the above address.

PREFACE

Manufacturers of products subject to performance standards under the Federal Food, Drug, and Cosmetic Act, Chapter V, Subchapter C - Electronic Product Radiation Control are required to furnish various reports to the Center for Devices and Radiological Health (CDRH). This guide is for use by manufacturers of lasers and products containing lasers in preparing Product Reports as required by paragraph 1002.10 and 1002.11 of Title 21 CFR (Code of Federal Regulations).

This reporting guide incorporates all current changes and should be used in conjunction with the companion publication, "Compliance Guide for Laser Products." You should read and understand that guide and determine how your product complies with the regulations before completing this report. To further assist you, relevant Sections of Title 21 CFR are cited in parentheses throughout this guide.

If you have specific questions, write to the Center for Devices and Radiological Health, Document Mail Center – WO66-G609, Attn: Electronic Product Reports, 10903 New Hampshire Ave., Silver Spring, MD 20993-0002, or call 1-800-638-2041, or e-mail us at dsmica@fda.hhs.gov.

I. Paul Leggett, Chief Nonmedical Radiological Devices Branch Division of Enforcement III Office of Compliance

PART 9: LIFE AND ENDURANCE TESTING	22
PART 10: INSTRUMENTATION AND CALIBRATION	24

GENERAL INSTRUCTIONS

Product Reports, Supplemental Reports, and Abbreviated Reports must be submitted to the Center for Devices and Radiological Health (CDRH) at the address on the following page prior to introduction of the reported products into commerce. (This includes products imported into the U.S.)

This guide should be followed for all lasers and products containing, incorporating, or intended to incorporate, a laser or laser system [see the definition of "laser product" in section 21 CFR 1040.10(b)(21)]. A separate guide for reporting additional information concerning laser light shows is being published concurrently with this guide and must be used in conjunction with this guide when appropriate (Reporting Guide for Laser Light Shows and Displays).

A complete Product Report is required for each laser product model or model family. Product Reports were formerly called Initial or Model Change Reports. Since these reports contain essentially the same information, the single term, Product Report, is now used. CDRH suggests that a complete report on one model of a family be submitted, with a separate Supplemental Report for each of the other models in the family. The Supplemental Report should respond in detail to the parts of the guide where there are differences to report, referencing the number of the affected item. Items that are unchanged need only be referenced to the original report.

A new or modified model belonging to a previously reported model family must be reported in a Supplemental Report on that model family prior to its introduction into commerce.

If an individual item or requirement of the standard is not appropriate for the laser product, so indicate. In general, any aspect of the product that pertains to radiation safety should be reported, including aspects not covered by the guide, such as special use conditions; other controls, indicators or warnings; and aspects for which there are no applicable provisions in sections 1040.10 and 1040.11.

Much of the information requested in this guide can be given in the space provided. Where attachments are required, so indicate in the space provided in the body of the guide. Attachments should be clearly numbered the same as the specific part of the guide to which they are addressed. For example, an attachment responding to Part 3.2 should be labeled "Attachment 3.2."

The report for each laser product model family should be complete and separable from the reports for other model families. However, certain information to be reported may be the same for two or more model families, such as quality control and testing programs, instrumentation, and calibration procedures. Such information may be fully reported in one model family report and referenced in another. If this is done, the reference must be clear and unambiguous, including the CDRH accession number, date, and item number.

The manufacturer must be sure that referenced information is accurate, current, and applicable to the reported models. Information that is applicable to more than one model family, but cannot be referenced in accordance with the above guidance, should be duplicated and included in each report.

When new models of a laser product are introduced, if the models satisfy the criteria for an established reporting exemption or if the new models do not involve changes in radiation emission or performance requirements, then the manufacturer need not report the models prior to introduction into commerce. Rather, the manufacturer is only required to identify them in the annual report, or in quarterly updates to the annual report. Quarterly updates to annual reports should be clearly marked as such and be submitted prior to December 1, March 1, and/or June 1 when required. [See 21 CFR 1002.13(c).]

All symbols, units, and unusual terms in the report must be adequately defined and consistently used. Please use the terms as defined in Section 1040.10(b) and in the IEEE Standard Dictionary of Electrical and Electronic Terms (IEEE Std. 1001972 and ANSI C42.1001972).

All reports and correspondence must be addressed to:

Center for Devices and Radiological Health Document Mail Center – WO66-G609 Attn: Electronic Product Reports 10903 New Hampshire Avenue Silver Spring, MD 20993-0002

When a report is received at CDRH, a unique accession number will be assigned for future reference. The submitter will be informed of the accession number in a letter of acknowledgment, which should not be construed as a technical review of the report. Submitters should clearly identify Supplemental Reports with the accession number of the relevant Product Report.

The Product Reporting Guides and Annual Reporting Guides are available from the Division of Small Manufacturer's Assistance (DSMA) in Rockville, Maryland at 1-800-638-2041. DSMA should be contacted for requests of any current documents, including information on medical device approval procedures, registration & listing of medical devices, and the reporting guides mentioned here. If you have specific questions regarding regulations or filling out these reports, call the Radiological Health staff at 1-800-638-2041, or e-mail us at dsmica@fda.hhs.gov.

DEFINITIONS

NOTE: These definitions have been revised.

<u>Product Report (21 CFR 1002.10)</u> - A Product Report is a report submitted by a manufacturer of a regulated product, e.g., laser products, sunlamps, TV. The Product Report describes the product, details how the product complies with the standard, and explains the quality control program to assure compliance. A Product Report can be used for families of products as well as for individual products.

<u>Supplemental Report (21 CFR 1002.11)</u> - A Supplemental Report provides information supplementary to a previously submitted Product Report. It is used to report a new model in a previously reported model family, a modification of a previously reported model, or other changes to a previous report (e.g., changes in testing programs, additions or changes in user or service manuals, responses to CDRH report review letters).

Supplemental Reports are also required for changes that:

- a. affect actual or potential emission,
- b. decrease the degree of compliance with the performance standard, or
- c. result in a decreased probability of detecting product noncompliance or increased radiation emission.

Supplemental Reports should clearly reference the CDRH accession number of the Product Report and the appropriate sections of this guide.

Annual Report (21 CFR 1002.13) - An Annual Report summarizing the required records must be submitted by September 1 for the 12 months ending on June 30 of the same year. In addition, the Annual Report is the appropriate vehicle for identifying new models for which Supplemental Reports are not required. If the new models do not involve changes in radiation emission or performance requirements, then the manufacturer need only identify them in their annual report, or in quarterly updates to the annual report. Copies of the annual report form to be followed are available from DSMA by calling 1-800-638-2041.

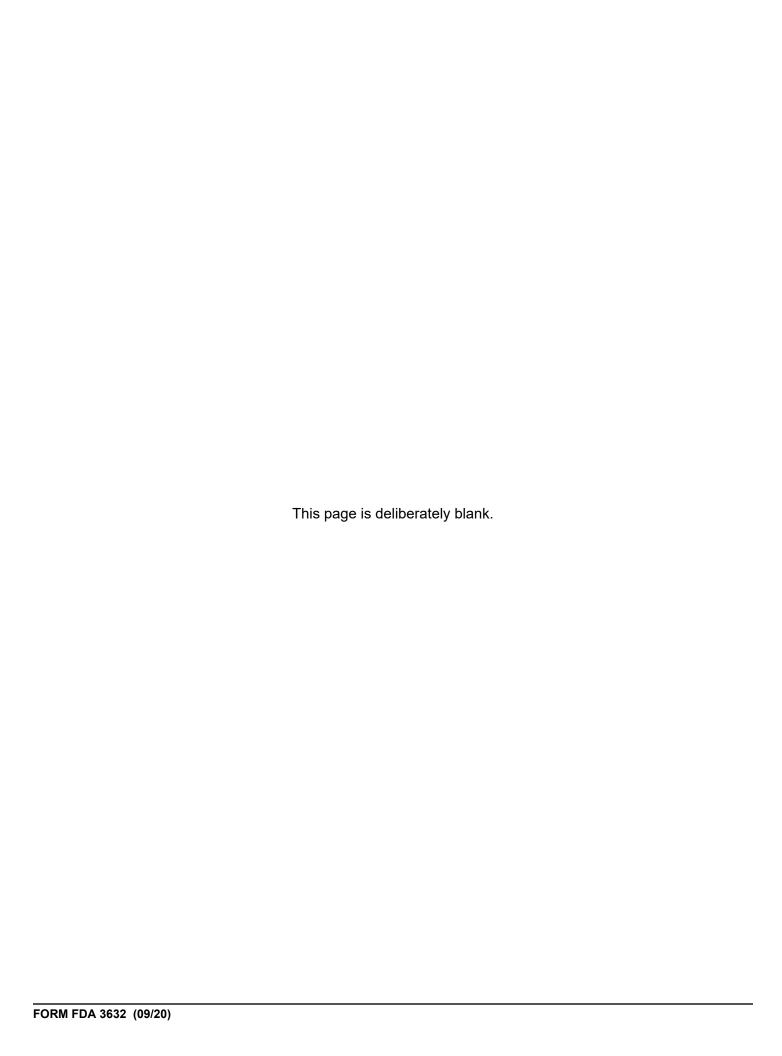

<u>Model Family</u> - A model family is a group of two or more laser product models with basically similar design, performance features and intended function, manufactured under the same or very similar quality control and testing procedures. Models within the same family may have different outputs and different laser media and, in some cases, may belong to different classes.

Applicability of reporting and recordkeeping requirements for laser products:

Class I laser products and Class I laser products containing Class IIa, II, and IIIa lasers will require: Product Report, Annual Report, test records, manufacturer's distribution records, and dealer/distributor distribution records.

Note that for these products, no Supplemental Reports are required. Furthermore, some Class I laser products have already been exempted from the requirement for distribution records (see Notices to Industry dated August 9, 1988, Laser Notice #41, December 18, 1989, #42, and January 6, 2006, #54).

PART 3: COMPLIANCE WITH THE LABELING REQUIREMENTS

For each of the following labels required for the product being reported, provide a sample or a facsimile of each label. Clearly indicate the locations on the product of all required labels in your response to this Part or to Part 5. Reference to diagrams, photographs, blueprints, product literature, etc., is acceptable. See Compliance Guide, page 7, for assistance.

3.1	Certification label - Required on all laser products (1010.2).				
Is the	label (or a copy) submitted with this report?	()	Yes	()	No
Locati	ion on product:	_			
3.2	Identification label - Required on all laser products (1010.3).				
Is the	label (or a copy) submitted with this report?				
		()	Yes	(No
Locati	ion on product:	_			
3.3	Warning logotype - Required on Class II, III, and IV laser products. [1 (4), (8), (9), (10)].	040.10	O(g)(1), (2),	(3),
Is the	label (or a copy) submitted with this report?				
		()	Yes	()	No
Locati	ion on product:	_			
3.4	Warning label - Required on Class IIa laser products [1040.10(g)(1)(i)]				
Is the	label (or a copy) submitted with this report?				
		()	Yes	()	No
Locati	ion on product:	_			

3.5	Aperture label(s) - Required on Class II, III and IV laser products [1040.10(g)(5), (8), (9), (10) or 1040.11(a)(3)].						
Are th	te label(s) (or copies) submitted with this report?	()	Yes	()	No		
Locat	ion on product:	_

6.5	Describe all col and describe wl								e(s) a	nd levels
	Is description a	ttached	1?					_ (<u> </u>)	Yes	(<u></u>) No

PART 7: COMPLIANCE WITH THE PERFORMANCE REQUIREMENTS

	7.1.1	Describe the product's protective housing and how it serves to human access to laser radiation.	preven	t unne	ecessar	ÿ
		Is additional information attached?	()	Yes	()	No
	7.1.2	Describe how the protective housing prevents access to unnece radiation.	ssary c	ollate	ral	
		Is additional information attached?	()	Yes	(_)	No
7.2	Safety	interlocks - Applicable for all laser products $[1040.10(f)(2)(i)]$				
	7.2.1	Provide a detailed mechanical diagram showing the location of incorporated into the laser product for radiation safety.	each i	nterlo	ck	
		Is a mechanical diagram attached?	()	Yes	()	No
		Describe each interlock and explain how each such interlock pand/or collateral radiation when each portion of the protective				ser
				<u> </u>		
		Is additional information attached?	()	Yes	()	No

	7.2.2	Provide an electrical block diagram illustrating the logic of the interlock system.
		Is an electrical diagram attached? () Yes () N
	7.2.3	For each safety interlock, state whether actuation is intended during operation, maintenance, service, or any combination thereof.
		Is additional information attached? (() Yes () N
	7.2.4	For each safety interlock, state the highest level of laser radiation and collateral radiation to which access is prevented.
7.3	Defeat and (ii	table safety interlocks - Applicable to all laser products [1040.10(f)(2)(ii)
	7.3.1	Identify which safety interlocks are designed to allow defeat and describe how they operate.
		Is additional description attached? (Yes () N
	7.3.2	For each safety interlock designed to allow defeat, state whether defeat is intended during operation, maintenance, service, or any combination thereof.

	7.3.3	For each safety interlock designed to allow defeat, describe how replaced removed or displaced portion of the protective housing is not possible where safety interlocks are defeated.			
	7.3.4	For each safety interlock designed to allow defeat, describe the means of visible or audible indication of defeat.	`pro	ovidir	ng a
7.4		v interlock failure - Applicable to all required safety interlocks [1040.10(f) nt access to Class IIIb or IV levels of laser radiation.	(2)	(iii)] 1	that
	7.4.1	Describe how each safety interlock is "fail-safe," i.e., precludes removal displacement of the interlocked portion of the protective housing upon fasafety interlock or is redundant.		re of t	the
		Are electrical/mechanical diagrams or additional information attached? () Ye	s	()	No
	7.4.2	Describe the possible modes of failure of each safety interlock and the referet upon the radiation safety of the laser product.	sul	tant	
		Is additional information attached? () Ye	es	()	No

	7.4.3	State the rating of each safety interlock, including the number of operational cycles before failure.
7.5	Remot	re interlock connector - Applicable to Class IIIb or IV laser systems [1040.10(f)(3)]
	7.5.1	Describe the electrical and mechanical construction and operation of the remote interlock connector. Give its circuit and physical location.
		Are electrical/mechanical diagrams or additional information attached? (Yes (No
	7.5.2	Record the open-circuit electrical potential difference between the terminals of the remote interlock connector.
		Volts
7.6	Key co	ontrol - Required for Class IIIb or IV laser systems [1040.10(f)(4)]
	7.6.1	Describe the electrical and mechanical construction of the key-actuated master control.
		Are electrical/mechanical diagrams or additional information
		attached? () Yes () No
	7.6.2	Describe the function of the key-actuated master control and how it renders the laser inoperable when the key is removed.
		Are electrical/mechanical diagrams or additional information attached? () Yes () No

	7.6.3	Is the key removable in the "On" position?	(Yes	(<u></u>) No
7.7		radiation emission indicator - Required for Class II, IIIa, IIIb, or $10(f)(5)$	r IV laser sys	stems
	7.7.1	Describe in detail the mechanical and electrical characteristics indicators installed pursuant to Section 1040.10(f)(5)(i) or (ii) locations. Note that if the energy source and remote controlle more than 2 meters, then each control must have an emission in	and give the r(s) are separ	ir
		Are electrical/mechanical diagrams or additional information	attached?	
			(Yes	(<u></u>) No
	7.7.2	Record the length of time each emission indicator of Class IIII is actuated prior to the emission of accessible laser radiation.	b and IV lase	r systems
		Emission indicator delay: sec		
7.8	Protec	tive eyewear - Applicable to Class II, IIIa, IIIb, or IV laser syste	ems [1040.10)(f)(5)(iv)]
		whether protective eyewear is supplied or recommended for use confirm that any visible emission indicator can be clearly seen that.		
	Is prot	tective eyewear supplied?	(Yes	(<u></u>) No
	Is it re	ecommended?	(Yes	(<u></u>) No
	Can vi	sible emission indicators be seen through eyewear?	(□) Yes	(□) No

7.9	Beam	attenuator - Required for Class II, IIIa, IIIb, or IV laser systems [1040.10(f)(6)]
	7.9.1	For each beam attenuator, describe the mechanical and electrical characteristics and how, when actuated, the attenuator prevents access by any part of the human body to all laser and collateral radiation in excess of the accessible emission limits of Class I and Table VI.
		Are electrical/mechanical diagrams or additional information attached? () Yes () No
	7.9.2	Describe the permanency of attachment of each beam attenuator.
		NOTE: You may apply for approval of alternate means of providing this protection if a beam attenuator is inappropriate to the product.
7.10	Locati	on of controls - Applicable to Class II, IIIa, IIIb, or IV laser products [1040.10(f)(7)]
	produc access	n how the location of each of the operation and adjustment controls of the laser at is such that human exposure to laser or collateral radiation in excess of the lible emission limits of Class I and Table VI is prevented during operation or ment of such controls.

/ iewing	optics - Applicable to all laser products [1040.10(1)(8)]
7.11.1	State whether all laser and collateral radiation accessible by virtue of viewing optics, viewports, and display screens incorporated into the reported model of laser product is less than the accessible emission limits of Class I and Table VI during operation and maintenance. Include with your calculations pertinent attenuation factors, window transmission characteristics, etc.
	Are electrical/mechanical diagrams or additional information attached? () Yes () No
radiati	NDER : Report in Part 5 the location and identification of laser and collateral on made accessible by viewing optics, viewports, and display screens. In Part 6, the highest levels.
7.11.2	Describe in detail, using diagrams or photographs and radiation transmission or reflection spectra, each shutter or variable attenuator incorporated into viewing optics, viewport, or display screen. Describe how exposure of the eye to laser or collateral radiation in excess of the accessible emission limits of Class I and Table VI is prevented whenever the shutter is opened or the attenuator is varied.
	Are diagrams/photographs or additional information attached? () Yes () No

	7.11.3	Describe how exposure of the eye to laser or collateral radiation in excess of the accessible emission limits of Class I and Table VI is prevented in the event of failure of the shutter or variable attenuator, as required by Section 1040.10(f)(8)(ii).
		Are diagrams or additional information attached? () Yes () No
7.12		ng safeguard - Required for certain laser products with scanned laser radiation $10(f)(9)$].
	failure	be the mechanical, electrical, and functional characteristics of any required scan safeguard. Include calculations to show that the safeguard's reaction time is adequate appliance with this section.
	Are ele	ectrical/mechanical diagrams, calculations, or additional information attached?
	the em	: A safeguard is required when scan failure would cause the product to exceed dission limits of the class of the product, or in the case of Class IIIb or IV laser cts would cause the accessible emission limits of Class IIIa to be exceeded.
7.13	Manua	l reset - Applicable to Class IV laser systems manufactured after August 20, 1986.
	manua	e the circuit and physical description and location of the means provided to require I restart following interruption of emission caused by power failure of at least 5 s or deactivation through the remote interlock connector.

7.14 Medical laser product - Applicable to Class III or IV medical laser products intended for in-vivo surgical, therapeutic, or diagnostic irradiation of the human body. NOTE: The requirement in section 1040.11(a) does not apply to visible aiming beams less than the accessible emission limits of Class IIIa except for ophthalmic indications. If your product is a Class III or IV medical laser product, provide the following information: 7.14.1 Describe the means incorporated into the product to measure the level of laser radiation intended for irradiating the human body; include circuit diagrams and/or optical system diagrams. Are electrical/mechanical diagrams, calculations, or additional information attached? (Yes (□) No 7.14.2 Specify the uncertainty in the measurement system and describe the method by which it was derived. Are calculations or additional information attached? () Yes () No 7.14.3 Is the displayed power/energy level measured at the point of delivery or earlier and then calculated? If the displayed level is calculated incorporating system constants, losses, attenuation factors, etc., please provide calculations to demonstrate accurate calibration of the delivered beam to within + or - 20%, as required by 1040.11(a)(1).

Laser Product Report (6/92)

Page 19

(□) Yes (□) No

Are calculations or additional information attached?

	7.14.4 Are procedures and a schedule for recalibration of the measurement system included in the user instructions?
	() Yes () No
	If yes, please identify location in the user instructions:
7.15	Surveying, leveling, or alignment laser products - Is the product a surveying, leveling, or alignment laser product? () Yes () No
	If yes, then it is subject to the requirements of section 1040.11(b). If the product's class exceeds Class IIIa then an approved variance from the performance requirements in this section would be necessary prior to introduction into commerce. Procedures for applying for a variance are given in section 1010.4, and described in the Compliance Guide, page 13.
7.16	Demonstration laser products - Is the product a demonstration laser product?
	(<u>)</u> Yes (<u>)</u> No
	If yes, then it is subject to the requirements of section 1040.11(c). If the product's class exceeds Class IIIa then an approved variance from the performance requirements in this section would be necessary prior to introduction into commerce. Procedures for applying for a variance are given in the Compliance Guide, pages 13 and 16-22.
	An Application for a Variance from 21 CFR 1040.11(c) for a Laser Light Show, Display, or Device (form FDA 3147) must be submitted, following the instructions on the form. A Laser Light Show report may also be required if you intend to produce shows or displays with Class IIIb or Class IV demonstration laser products. The Reporting Guide for Laser Light Shows and Displays should be filled out and submitted along with this report and the variance application, following the instructions in each document.
	7.16.1 Is a Variance application being submitted along with this report?
	(Yes - date of submission: No
	7.16.2 Is a Laser Light Show report being submitted along with this report?
	(Yes - date of submission: No

PART 8: QUALITY CONTROL TESTS AND TESTING PROCEDURES

ements. These may include:
specification controls for critical components,
manufacturing and assembly control procedures,
inspection and test control procedures,
assembly and test traveler forms,
inspection and test reports and checklists, and/or
other(s)(specify)
nal quality control and testing procedures have not been implemented or are not ent to assure that your product(s) will comply with the standard, explain how you that your products comply and submit supporting documentation.

NOTE: Section 1010.2(c) requires that certification be based on a test, in accordance with the standard, of each unit or on a program in accordance with good manufacturing practices. Failure to maintain an adequate testing program may result in disapproval of the program by CDRH.

PART 9: LIFE AND ENDURANCE TESTING

Describe those tests and controls used to ensure that the reported product will remain in compliance with the Federal laser product performance standard during its useful life. Items to be addressed include:

Dimensional stability and rigidity of mechanical parts and assemmounts	-
Is additional information/documentation attached?	() Yes ()]
Design and ratings of electrical and electronic components	
Is additional information/documentation attached?	() Yes ()]
Environmental stability of components such as filter materials, c	
Is additional information/documentation attached?	

Is additional information/documentation attached?	(□) Yes
Other feeters that might effect your product's rediction sefety	· _
ther factors that might affect your product's radiation safety	

NOTE: Maintenance and/or service instructions must include schedules for maintenance and replacement of those components related to the compliance of the product that may be expected to be replenished or replaced during the life of the product.

PART 10: INSTRUMENTATION AND CALIBRATION

Describe those tests and controls used to ensure that the reported product will remain in compliance with the Federal laser product performance standard during its useful life. Items to be addressed include:

	_			
Is additional information attached?	(Yes	()]		
Indicate how the measurement system collects or accounts for the total radiant energy or power specified in Section 1040.10(e).				
Is additional information attached?				
Provide a measurement error analysis (for all sources of error identified statement for all measurement data reported.	d) and an un	certaint		

NOTE: If it is clear from the measurement data, including the total estimated uncertainty, that the levels are well below the applicable class limit, then an error analysis and uncertainty statement are not required. For, example, an error analysis and uncertainty statement would not be required for a 1.5 milliwatt HeNe laser product classified in Class IIIa.

(e.g., calib	orated by your company against a working stan trument, sent to an independent calibration laborated by the sent to an independent calibrated by the sent calibrated by the sent to an independent calibrated by the sent calibrated by the sent calibrated by the sent calibra	dard, returned to the manufactu
-	nal information attached?	

NOTE: If your laser product operates at a level closely approaching a specified limit, high accuracy and traceability to the National Institute of Standards and Technology (previously known as the National Bureau of Standards) are important.
